

DEPARTMENT OF CIVIL ENGINEERING
NATIONAL INSTITUTE OF TECHNOLOGY SRINAGAR, J&K - 190006

SCHEME FOR M.TECH. IN
TRANSPORTATION ENGINEERING & PLANNING

Applicable for Batch-2025 and Onwards

SEMESTER – I

Subject Code	Subject Name	L	T	P	Credit
<i>Core Courses</i>					
MTHM-101	Applied Statistics	2	1	-	3
CTE-101	Transportation Planning	2	1	-	3
CTE-102	Traffic Engineering	2	1	-	3
CTE-103	Traffic Laboratory/Field studies	-	-	2	1
CTE-104	Seminar-I	-	-	2	1
<i>Elective I (any one)</i>					
CTE-105	Computer Applications	2	1	-	3
CTE-106	Transportation Economics & Evaluation	2	1		3
CTE-107	Land Use Transport Planning & Modelling	2	1	-	3
CGE-101	Engineering Behavior of Soils	2	1	-	3
CWE-111	Programming for Civil Engineers	2	1	-	3
<i>Elective II (any one)</i>					
CTE-108	Transportation Facility Design	2	1	-	3
CTE-109	Road Safety & Environment	2	1	-	3
CTE-110	Analysis & Modelling of Asphalt Binders & Mixes	2	1	-	3
CSE-103	Advanced Concrete Technology	2	1	-	3
CSE-106	Construction Technology and Management	2	1	-	3
Total					17

L – Lecture, T – Tutorial/Seminar, P – Practical/Studio work

SEMESTER – II

Subject Code	Subject Name	L	T	P	Credit
<i>Core Courses</i>					
CTE-201	Pavement Analysis & Design	2	1	-	3
CTE-202	Public Transport Planning	2	1	-	3
CTE-203	Highway Materials Laboratory	-	-	2	1
CTE-204	Traffic Flow Theories	2	1	-	3
CTE-205	Seminar-II	-	-	2	1
<i>Elective III (any one)</i>					
CTE-206	Geometric Design of Highways and Streets	2	1	-	3
CTE-207	Environmental Impact Assessment and Management	2	1	-	3
CTE-208	Decision Models in Management	2	1	-	3
CWE-213	GIS & Remote Sensing Applications in Civil Engineering	2	1	-	3
<i>Elective IV (any one)</i>					
CTE-209	Soft Computing Techniques	2	1	-	3
CTE-210	Intersection Design and Analysis	2	1	-	3
CTE-211	Urban Planning Techniques & Practice	2	1	-	3
CGE-201	Ground Improvement Techniques	2	1	-	3
Total					17

L – Lecture, T – Tutorial/Seminar, P – Practical/Studio work

SEMESTER – III

Subject Code	Subject Name	L	T	P	Credit
Core Courses					
CTE-301	Pavement Evaluation and Management	2	1	-	3
CTE-302	Airport Planning and Design	2	1	-	3
Elective-V (any one)					
CTE-303	Cold Region & Hill Road Engineering	2	1	-	3
CTE-304	Project Appraisals & Development Management	2	1	-	3
CSE-301	Advanced Bridge Engineering	2	1	-	3
CWE-302	Hydraulic Structures	2	1	-	3
Dissertation					
CTE-305	Dissertation Preliminaries	-	-	10	5
Total					14

L – Lecture, T – Tutorial/Seminar, P – Practical/Studio work

SEMESTER – IV

Subject Code	Subject Name	L	T	P	Credit
CTE-401	Dissertation	-	-	25	12
Total		-	-	25	12

Grand Total of Credits = 60

Evaluation:

Continuous Evaluation: 24%

Mid Term: 26%

End Term: 50%

NOTE:

1. Each Elective Group contains at least one subject of inter-department or of other P.G. areas of the department in order to make the system more flexible and to meet the options of P.G. students of their interest area.
2. Examination of Practicals/Tutorials will be conducted by two internal examiners.
3. One external examiner & concerned internal examiners shall be conducting viva-voce examination in case of Dissertation at Semester IV.
4. Evaluation and examination system for seminar and dissertation will be at par with other P.G. programs of the department.
5. The dissertation involves a detailed study of a Transportation related, problem (actual field/ research) which a student has to carry out under the supervision of one of the faculty members of the Department. The dissertation work can also be of interdisciplinary nature with transportation element involved.
6. Part-time students will be eligible to take up the 3rd semester regular in their 5th semester, only when they have successfully completed the 1st and 2nd semesters.

DEPARTMENT OF CIVIL ENGINEERING, NIT, SRINAGAR
SYLLABUS FOR M.TECH IN
TRANSPORTATION ENGINEERING & PLANNING

1ST SEMESTER

MTHM-101 APPLIED STATISTICS

SEMESTER: Ist	L	T	P	C
COURSE NO. MTHM-101	2	1	0	3

Social Research Formulation: Design of research, scaling techniques, sampling techniques, design of questionnaire.

Statistics & Probability Base: Various probability distributions & their applications, parameter estimation, hypothesis testing, random variables, method of maximum likelihood, hypothesis testing to compare multiple population, statistical quality control.

Linear & Multi-linear Regression and Correlation Analysis: Estimation and analysis of simple regression models, correlation coefficients, analysis of correlation coefficients, hypothesis tests associated with regression and correlation coefficients, multiple regression models

Optimisation techniques: Linear programming, Simplex method, transportation model, concepts of non – linear programming, decision theories-rules, decision under uncertainty.

5. Sharma J.K., Operation Research: Theory & Applications, MacMillan India Ltd., 2000.
6. Bhandarkar P.L., Wilkinson T.S., Methodology & Techniques of Social Research, Himalaya Publishing House, 1991.
7. Gujarati Damodar, Basic Econometrics, Sheldor Ross Publications

CTE 101: TRANSPORTATION PLANNING

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-101	2	1	0	3

Transportation Planning Process & Surveys: Urbanisation process & urban land use structure, transportation problems in Indian context, transportation study area, zoning & surveys, transportation planning process- inventory, model building, forecasting and evaluation stages, planning in system engineering framework.

Travel Demand Estimation: Assumptions in demand estimation- sequential, recursive and simultaneous process. Basic planning stages-trip generation, trip distribution, modal split and route assignment, various techniques of demand estimation and analysis.

4. Hutchinson B.G., Principles of Urban Transportation System Planning, Mc-Graw Hill, 1974.
5. Khisty C J., Lall B.Kent, Transportation Engineering – An Introduction, Prentice-Hall, NJ, 2005
6. Ortuzar, J. D., Willumsen, L.G., Modeling Transport, John Wiley & Sons, 1994
7. Papacostas C.S. and Prevedouros, P.D., Transportation Engineering & Planning, PHI, 2002

CTE 102 TRAFFIC ENGINEERING

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-102	2	1	0	3

Traffic Engineering & Studies: Scope, traffic elements, characteristics-vehicle, road user and road; traffic studies-speed & delay, traffic volume, O & D, parking and accidents, sample size, study methodology, data collection & presentation.

Traffic Analysis: Speed, volume, parking & accident data analysis, statistical approach, traffic maneuvers, conflict points, traffic stream characteristics, relationship between speed, flow and density, level of service & capacity analysis.

Traffic Design: Channelisation of islands for different traffic situations, design of rotaries, grade separated intersections, their warrants, design of road lighting at different road sections & intersections.

Traffic Control Devices: Traffic signs, markings, and signals; principles of signal design, Webster's method, signal coordination.

Traffic Regulation & Management: Speed, vehicle, parking, enforcement regulations, mixed traffic regulation, management techniques one-way, tidal flow, turning restrictions etc., road safety measures.

References:

2. Kadiyali, L.R., Traffic Engineering and Transport Planning, Khanna publishers, New Delhi, 2002.
3. O'Flaherty C A, Highways- Traffic Planning & Engineering, Edward Arnold, UK
4. Saxena S.C., Traffic Planning & Design, Dhanpat Rai & Sons, New Delhi, 1989.
5. Salter, R J., Highway Traffic Analysis and Design, ELBS.

6. Matson, Smith and Hurd, 'Traffic Engineering' Mc-Graw Hill Book Co.
7. IRC-SP 41: Guidelines for the Design of At-Grade Intersections in Rural & Urban Areas
8. Other relevant IRC codes.

CTE 103: TRAFFIC LABORATORY/FIELD STUDIES

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-103	0	0	3	1

Field Study/lab work: Study of Road user characteristics in lab; study of traffic speed & delay, traffic volume, O & D, parking, and accident studies in the field. Data collection, analysis, and presentation.

CTE-104: SEMINAR-I

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-104	0	0	2	1

Each student is required to prepare and submit a seminar report in consultation with concerned transport faculty members. The students are required to make a presentation, and a question-answer session will follow the presentation.

Elective-I

CTE-105 COMPUTER APPLICATIONS

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-105	2	1	-	3

Introduction: Digital Computer Systems, problem solving techniques, introduction to programming languages, computer language and C++, source programme, Compilation and debugging.

C++ Programming Basics: Using Turbo C++ , Basic program construction, preprocessor directive, #include, #define, Header and Library functions, Keywords, INPUT-OUTPUT Statements, comments, Constants, Variables, and operators, Formatting statements, ENDL and SETW manipulators.

Loops, Decision and Arrays: WHILE, DO-WHILE and FOR loops, general structure and control. IF, IF-ELSE statements, SWITCH, BREAK, CONTINUE statements, GOTO and labels, ARRAY fundamentals, types, use and manipulation of 2-D arrays as Matrices.

Functions: Concept of modularization of structured programming. Basics of functions, their types declaration, definition and structure.

Object Oriented Programming Concept: General concepts of Object Oriented Programming , Objects and Classes, Member Functions , user defined data , Pointers ,etc.

File Processing: Streams , String I/O, Character I/O, Object I/O, input-output with Multiple objects, File Pointers, Disk I/O with Member Functions, Error Handling, Printer Output.

Practical Applications: Programming for mathematical models of Civil Engineering problems and Management information systems, use of general purpose programmes.

References:

1. Object Oriented Programming with C++ by Robert Lafore
2. Object Oriented Programming with C++ by S.K. Panday.

CTE-106: TRANSPORTATION ECONOMICS & EVALUATION

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-106	2	1	-	3

Principles of Economics: Supply and demand models, consumer's surplus and social surplus criteria, framework for social accounting: accounting rate of interest, social opportunity cost, rate of interest, social time preference rate of interest, accounting prices of goods and services, measuring input costs, applications o social accounting frame work.

Transport Costs and Benefits: Fixed and variable cost, cost of improvement, maintenance cost, cost estimating methods, accounting for inflation, external costs, pavement cost analysis. Direct benefits-reduced vehicle operation costs, value of travel time savings, value of increased comfort and convenience, cost of accident reduction, reduction in maintenance cost.

Economic Analysis: Generation and screening of project alternatives, different methods of economic analysis: annual cost and benefit ratio methods, discounted cash flow methods, shadow pricing techniques, determination of IRR and NPV, examples of economic analysis, application economic theory in traffic assignment problem.

References:

1. Winfrey R, Highway Economic Analysis, International Textbook Company.
2. Kenneth J. Button, Transport Economics, Elgar
3. David A. Hensher, Ann M. Brewer, Transport : An Economics and Management Perspective, Oxford University Press
4. Emile Quinet, Roger Vickerman, Principles Of Transport Economics, Edward Elgar Pub
5. Road User Cost Study, Central Road Research Institute
6. Ian G. Heggie, Transportation Engineering Economics, McGraw Hill.
7. IRC:SP:30-1993, Manual on Economic Evaluation of Highway Projects in India

CTE-107: LAND USE TRANSPORT PLANNING & MODELING

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-107	2	1	-	3

Demographic and Employment Forecasting Models: Demographic models - linear, exponential and logistic models; cohort survival models - birth, aging and migration models; employment forecasting models - economic base mechanism; input and output models - dynamic models of population and employment, multiregional extensions

Landuse-Transportation Models: Need & role of transport models, Location models - opportunity models, accessibility models, lowry based land use- transportation models, transport models in practice, simplified transport demand models, Tour and Activity Based Models

Regional Transportation Development - Delineation of Planning Regions: Concept of region and space – types of regions, rural road network development approach, regional freight transportation-issues & approach, demand assessment, various models.

References:

5. Glassion John, Introduction to regional planning, Hutchinson and MIT Press, Cambridge, 1996.
6. Ortuzar J. D., Willumsen L.G., Modeling Transport, John Wiley & Sons, 1994

CGE-101 ENGINEERING BEHAVIOR OF SOILS

SEMESTER: 1st	L	T	P	C
COURSE NO. CGE-101	3	1	0	3

Origin and nature of Soils, Mineralogy, Distribution of soils, Clay – water - electrolytes system. Soil fabric and structure. Strength: Effective stress principle. Triaxial tests and applications. Shear strength parameters.

Factors affecting Strength: Structure and texture, porosity, confining pressure, Stress history, Large strain. Hvorslev's parameters, Degree of saturation, Anisotropy, Intermediate principal stress.

Consolidation: Influence of test parameters on results. Consolidation test. Determination of preconsolidation pressure. Triaxial consolidation, Anisotropic, K consolidation. Radial consolidation. Layered system.

Engineering Behaviour of Soils of India: Black cotton soils, Alluvial silts and sands, Aeolian deposits, Laterites, Marine clays, collapsible and sensitive soils.

Soil Engineering	- M.G.Sprangler
Foundation Engineering	- G.Leonards
Principles of Soil Mechanics	- R.F.Scott

CWE-111 PROGRAMMING FOR CIVIL ENGINEERS

SEMESTER: 1st	L	T	P	C
COURSE NO. CWE-111	2	1	0	3

R (Use R!): Introduction to RStudio: Installing RStudio, overview, packages, getting Help. Data Types: R Objects and attributes, vectors and lists, matrices; factors; data frames, dates and times; reading tabular data; Sub-setting and Operations. Some practical applications

Control Structures - Introduction; choices and loops, Loop functions: lapply; mapply; tapply; Some examples. Functional Programming: Introduction, scoping Rules; coding standards; piping; Practical applications; Some packages for Civil Engineers. Debugging: Introduction; general techniques, locating errors, interactive and non-interactive debugging

Python: Introduction: installation Anaconda and overview, libraries, and getting help.

Data types and structures: strings, scalars, vectors, matrices, lists, reading tabular data, Numpy and Pandas. Control structures: Introduction, choices and loops; Some examples. Functional Programming: functions, scoping, and classes; Some libraries for Civil Engineers; Debugging rules and ideas

Introduction to Matlab

References:

1. R for Data Science: Import, Tidy, Transform, Visualize, and Model Data/ Hadley Wickham, Garret Golemund/O'Reilly Media/1st Edition 2017
2. Advanced R/Hadley Wickham/ Chapman & Hall/CRC/ Second Edition, 2019
3. Introduction to Computation and Programming Using Python/ John V. Guttag/ MIT Press/Second Edition 2016

Elective-II

CTE-108 TRANSPORTATION FACILITY DESIGN

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-108	2	1	-	3

Introduction: Design of highways, design of at-grade intersections, design of signalized intersection, design of grade separated intersection, terminal design, and design of facilities for non-motorised transport.

Terminal Planning & Design: Terminal functions, analysis of terminals, process flow charts of passenger & goods terminals, terminal processing time, waiting time, capacity & level of service concept, study of typical facilities of highway, transit, airport and waterway terminals, concept of inland port.

Design of Highways: Hierarchy of highway system, functions, design designations, concepts in horizontal & vertical alignment, integration, optical design, geometrical standards for mobility & accessibility components, landscaping and safety considerations, evaluation and design of existing geometrics.

Design of Intersections: Review of design of at-grade intersections, signal coordination – graphic methods & computer techniques, grade separated intersections – warrants for selection, different types & geometric standards, spacing & space controls, ramps & gore area design.

2. IRC-SP41: Guidelines for the Design of At-Grade Intersections in Rural & Urban Areas
3. Salter, R J., Highway Traffic Analysis and Design, ELBS.
4. Edward K. Morlock, Introduction to Transportation Engineering & Planning, International Student Edition, Mc-Graw Hill Book Company, New York.

CTE-109 ROAD SAFETY & ENVIRONMENT

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-109	2	1	-	3

Introduction to Road Safety: Road traffic accident scenario in India and in world, Road safety and its importance, traffic rules and driving behavior, characteristics of accidents, Multidisciplinary approach to planning for traffic safety and injury control; pre crash and post crash models; Roles of vehicle , roadway traffic, driver, and environment, crash and injury causations; Accident analysis, Conflict points at intersections, Pedestrian safety

Road Safety Audit: Principles-procedures and practice, code of good practice and checklists, structuring of report, diagnosing crash problem and solutions

Energy related aspects of different transport technologies: Traffic calming Measures. Road transport related air pollution, sources of air pollution, effects of weather conditions, Vehicular emission parameters, pollution standards, measurement and analysis of vehicular emission; Imitative measures, Urban and non urban traffic noise sources, Noise pollution

EIA requirements of Highways projects: Procedure; MOEF World Bank/RC/UK guidelines; EIA practices in India..

6. Relevant IRC codes

CTE-110: Analysis & Modelling of Asphalt Binders & Mixes

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-110	2	1	0	3

Introduction: Performance Characteristics, Pavement Response Model vs Performance Model, Multiscale Model

Asphalt Rheology: Modelling Critical Properties of Asphalt Binders, Traditional Rheological Properties, Asphalt Susceptibility Parameters, Linear Viscoelastic Properties, Asphalt Viscoelastic Properties, Asphalt Modification, Critical Properties of Modified Asphalt, Binder Damage Behaviour,

Stiffness Characterization: Asphalt Concrete Stiffness, Methods of Measuring Stiffness, Factors, Temperature and Rate of Loading

Complex Modulus Characterization: Complex Modulus, Test Protocols, Compressive Axial versus SST-Shear Modulus, Stiffness as the Asphalt Mix Performance Indicator, Cyclic Sinusoidal Test Data, Mastercurve Development, Complex Modulus from Indirect Tensile Test, Dynamic Modulus Testing of Mixes, Interrelationships Among Concrete Stiffness, LVE Response Functions

Constitutive Models: VEPCD Modeling of Asphalt Concrete with Growing Damage, Unified Disturbed State Constitutive Modeling of Asphalt Concrete, DBN Law for the Thermo-Visco-Elasto-Plastic Behaviour of Asphalt Concrete

Models of Rutting: Rutting Characterization of Asphalt Concrete using Simple Shear Tests, Permanent Deformation Assessment for Asphalt Concrete Pavement and Mixture Design

Models for Fatigue Cracking and Moisture Damage: Micromechanics Modeling of Performance of Asphalt Concrete Based on Surface Energy, Field Evaluation of Moisture Damage in Asphalt Concrete

Models for Low-Temperature Cracking: Prediction of Thermal Cracking with TCMODEL, Low-Temperature Fracture in Asphalt Binders, Mastics and Mixtures

CSE-103: ADVANCED CONCRETE TECHNOLOGY

SEMESTER: Ist	L	T	P	C
COURSE NO. CSE-103	2	1	0	3

Concrete Making Materials: Aggregates – Classification, IS specifications, Properties, Grading, Methods of combining aggregates, specified gradings, Testing of aggregates.

Cement: Chemical composition, Hydration of cement, structure of hydrated cement, special cements, water chemical admixtures.

Concrete: Properties of fresh concrete, Hardened concrete, Strength, Elastic properties, Creep and Shrinkage, Variability of concrete strength.

Mix Design: Principles of concrete mix design, Methods of concrete mix design, Testing of concrete.

Special Concretes: Light weight concrete, Fibre reinforced concrete, Polymer concrete, Super plasticized concrete, Properties and applications.

Concreting Methods: Process of manufacturing of concrete, Methods of Transportation, placing and curing. Extreme weather concreting, Special concreting methods.

CSE-106: CONSTRUCTION TECHNOLOGY AND MANAGEMENT

SEMESTER: Ist	L	T	P	C
COURSE NO. CTE-106	2	1	0	3

Construction planning-Construction facilities, Schedules, Layout of Plant utilities, Construction methods: Excavation and handling of Earth and Rock; Production and handling of Aggregates and Concrete, cooling of concrete in dams, Drainage treatment of aquifers/sub-terranean reservoirs;

Tunneling, Tunneling in soft rocks- Grouting , chimney formation etc; Construction control and management-CPM/PERT, Human Factors, Organization.

2ND SEMESTER

CTE-201 PAVEMENT ANALYSIS AND DESIGN

SEMESTER: II nd	L	T	P	C
COURSE NO. CTE-201	2	1	-	3

Pavement Mix Analysis: Aggregate blending, bituminous mix design – Marshall stability approach, concrete mix design for roads.

Pavement Basics: Types & comparison, vehicular loading pattern, loading pattern on airport pavement, factors affecting design and performance of pavements, airport pavement, environmental impact on pavements, sub grade requirements

Design of Flexible Pavements: Analytical approach, flexible pavement layers, ESWL, repetitions of load, techniques of design methods, wheel load analysis, traffic analysis, stress distribution in subgrade soil, Burmister's theories, group index method, CBR approach, IRC guidelines, CRV method, triaxial & McLeod method, present practices, shoulder design.

Design of Concrete Pavements: Westergaard's approach, temperature & frictional stresses, design of expansion & longitudinal joints, design of dowel & tie bars, IRC guidelines, present design practices.

References:

5. IRC: 37, Guidelines for the Design of Flexible Pavements (Second Revision).
1. IRC: 58, Guidelines for the Design of Plain Jointed Rigid Pavements for Highways (Second Revision).

CTE-202: PUBLIC TRANSPORTATION PLANNING

SEMESTER: II nd	L	T	P	C
COURSE NO. CTE-202	2	1	-	3

Introduction: Public Transport system, Modes of public transport and comparison, public transport travel characteristics, selection of technology for transit service.

Transit Network Planning and Scheduling: Objectives, principles, Intercity and Regional transit system, considerations, demand, transit lines – types, geometry and characteristics, transit routes and their characteristics, timed transfer networks, prediction of transit usage, scheduling components, scheduling procedure, marginal ridership, crew scheduling

Design of Public transport infrastructures: Design of bus stops, design of terminals – principles of good layout, types of layouts, depot location, twin depot concept, crew facilities and amenities.

Public transport system Evaluation: transit service statistics, service requirement, Need of evaluation, performance measures, Evaluation methods

CTE-203: HIGHWAY MATERIALS LABORATORY

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-203	0	0	3	1

Laboratory Testing of highway materials- sub grade soil, coarse and fine aggregates, bituminous binders, bituminous mixes, cement and cement concrete

CTE-204: TRAFFIC FLOW THEORIES

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-204	2	1	0	3

Traffic Stream Characteristics: Measurement, microscopic and macroscopic Study of Traffic Stream Characteristics - Flow, Speed, and Concentration; Use of Counting, Interval, and Translated Distributions for Describing Vehicle Arrivals, Headways, Speeds, Gaps and Lags; Fitting of Distributions, Goodness of Fit Tests, gap acceptance.

Traffic Stream Models: Fundamental Equation of Traffic Flow, Speed-Flow-Concentration Relationships, Normalised Relationship, Fluid Flow Analogy Approach, Shock Wave Theory, Platoon Diffusion and Boltzman Like Behaviour of Traffic Flow, Car-Following Theory, Linear and Non-Linear Car-Following Models.

Queuing Analysis: Fundamentals of Queuing Theory, Demand Service Characteristics, Deterministic Queuing Models, Stochastic Queuing Models, Multiple Service Channels.

Highway Capacity & Level-of-Service Studies: Concepts, Factors Affecting Capacity & Level-Of Service, Capacity Analysis of Different Highway Facilities, Passenger Car Units, Problems in Mixed Traffic Flow.

Traffic Simulation: System Simulation, Generation of Random Numbers, Generation of Inputs – Vehicle Arrivals.

References:

8. Neylor, T.H. et al., Computer Simulation Techniques, John Wiley.

CTE-205: SEMINAR-II

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-205	0	0	2	1

Each student is required to prepare and submit a seminar report in consultation with concerned transport faculty members. The students are required to make a presentation, and a question-answer session will follow the presentation.

Elective-III

CTE-206 GEOMETRIC DESIGN OF HIGHWAYS AND STREETS

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-206	2	1	0	3

Highway Geometrics: Importance, highway system elements-road user and vehicular characteristics, mix traffic characteristics, classification of rural & urban roads, neighbourhood roads, roads in residential areas, geometric design factors-design speed, topography, traffic & environmental factors.

Cross-sectional Elements: Road surface characteristics- evenness, friction & skidding, camber values & implementation, lane width criteria for different modes, kerb, median, road margins, cross-sectional details for different categories of roads.

Sight distances: Sight distance factors & types, overtaking zones, grade impact, sight distances on head-light criteria.

Alignment: Alignment issues, factors, horizontal alignment, super-elevation design and implementation, pavement widening, transition curves, setting up of transition curves by surveying equipments, set back distances, vertical alignment, types of gradients and vertical curves, design of vertical curves & implementation.

Intersection Geometrics: Types of intersections, blind intersections, sight distances, island geometrics, geometrics for merging & diverging, geometrics for bus stop layouts, parking areas & fly-overs, rail-road level crossing.

CTE-207 ENVIRONMENTAL IMPACT ASSESSMENT & MANAGEMENT

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-207	2	1	-	3

Introduction: Concepts of environmental impact analysis, key features of National environmental policy act and its implementation, screening in the EIA process, utility and scope of EIA process, Environmental protection acts EIA at national level. Conceptual approach for environmental impact studies, planning and management of impact studies, matrix and network methodologies for impact identification, description of the affected environmental – environmental indices.

Prediction and Assessment of Impact on Air Environment: Basic information on air quality, sources of air pollutants, effects of air pollutants, key legislations and regulations, conceptual approach for

addressing air environment impacts, impact prediction approaches, assessment of significance of impacts, identification and incorporation of mitigation measures.

Prediction & Assessment of Impact on Noise & Social Environment: Basic information on noise, key legislation and guidelines, conceptual approach for addressing noise environment impacts, impact prediction methods, assessment of significance of impacts, identification and incorporation of mitigation measures, Conceptual approach for addressing socio-economic impacts, traffic and transportation system impacts, visual impacts, scoring methodologies for visual impact analysis

Decision Methods for Evaluation of Alternative: Development of decision matrix. Public participation in environmental decision making, Regulatory requirements, environmental impact assessment process, objectives of public participation, techniques for conflict management and dispute resolution, verbal communication in EIA studies.

6. Relevant IRC & CPCB codes.

CTE-208: DECISION MODELS IN MANAGEMENT

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-208	2	1	0	3

Management Decisions: Concepts, Operation research. Decision environment, Decision making processes.

Linear Programming: Advanced Methods- Heuristics, Simplex method, duality, post- optimality analysis, non linear programming, Sensitivity analysis, Unconstrained and constrained optimization, Kuhn- Tucker theory; Quadratic programming applications.

Transportation LP problems: Assignment problems, Queuing theory, Queuing Models, Markov decision processes; Applications to inventory management and Replacement processes.

Discrete event simulation; Generation of random variables, simulation processes and languages. Network models. Shortest path method, maximum flow. Minimum spanning tree problem.

Integer programming, goal programming, dynamic programming. Decision theory. Role of knowledge; Deterministic and probabilistic situation, Single and multiple person decision making.

CWE-213 GIS & REMOTE SENSING APPLICATIONS IN CIVIL ENGINEERING

SEMESTER: 2ND	L	T	P	C
COURSE NO. CWE-213	2	1	0	3

Principles of GIS, GPS and Remote Sensing: Basic concepts of GIS & GPS, introduction to remote sensing, remote sensing system, electromagnetic spectrum, black body, atmospheric windows, spectral characteristics of earth's surface, range of sensing system.

GPS: Basic concepts, components, factors affecting, GPS setup, accessories, segments- satellites & receivers, GPS applications, Case studies

Platforms, Sensors and Data Products: Ground aircraft, Spacecraft platforms, photographic sensors, scanners, radiometers, radar and mission planning, data types and format, scale and legend.

Interpretation and Analysis Techniques: Multispectral, multitemporal, multisensoral, multistage concepts, photo interpretation techniques for aerial photo and satellite imagery, interpretation elements, false colour composition, etc.

Photogrammetry: Photogrammetry- Basic application, applications of aerial photo interpretation to water resources engineering.

Digital Analysis: Preprocessing and processing, image restoration/enhancement procedures, pattern recognition concepts, classification algorithms, post processing procedures.

Structure of GIS: Cartography, Geographic mapping process, transformations, map projections, Geographic Data Representation, Storage, Quality and Standards, database management systems, Raster data representation, Vector data representation, Assessment of data quality, Managing data errors, Geographic data standards.

GIS Data Processing, Analysis and Modeling: Raster based GIS data processing – Vector based GIS data processing – Queries – Spatial analysis – Descriptive statistics – Spatial autocorrelation – Quadrant counts, and nearest neighbour analysis – Network analysis – Surface modeling – DTM.

Application in Civil Engineering: River drainage and flood flow, watershed delineation and characteristic studies, command area mapping, drought assessment, groundwater inventory, soil moisture study, water quality assessment and monitoring, Land use data acquisition, disaster management.

Elective-IV

CTE-209 SOFT COMPUTING TECHNIQUES

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-209	2	1	0	3

Genetic Algorithms: Goals of optimization - Comparison with traditional methods - Schemata – Terminology in GA – Strings, Structure, Parameter string - Data Structures – Operators - Coding fitness function – Algorithm - Applications.

Fuzzy Logic: Concepts of uncertainty and imprecision – Sets - Concepts, properties and operations on Classical sets & Fuzzy Sets - Classical & Fuzzy Relations - Membership Functions - Fuzzy Logic – Fuzzification - Fuzzy Rule based Systems – Fuzzy propositions - Applications.

Artificial Neural Networks: Basics of ANN; Models of a Neuron – Topology: Multi Layer Feed Forward Network (MLFFN), Radial Basis Function Network (RBFN), Recurring Neural Network (RNN) – Learning Processes: Supervised and unsupervised learning. Error-correction learning, Hebbian learning; Single layer perceptrons - Multilayer perceptrons - Least mean square algorithm, Back propagation algorithm Applications.

Hybrid Systems: Fuzzy neural systems – Genetic Fuzzy Systems – Genetic Neural Systems.

CTE-210: INTERSECTION DESIGN AND ANALYSIS

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-210	2	1	0	3

Introduction: Intersection, types of intersection, types of manoeuvres, Conflict points and area, Concept of relative speed, Design principles, Concept of capacity and LOS.

At-grade and Grade-separated Intersection: At-grade intersection, Intersection geometrics, Types, advantages and limitations, Types of Grade-separated Intersection, Intersection geometrics, advantages and limitations.

Intersection Design and Operation: Influence of Intersection geometrics on design/operation, Design guidelines of rotary and roundabout intersection, Operational analysis of rotary and roundabout intersections, Operational analysis of two-way and all-way stop controlled intersections, Operational analysis of signal-controlled intersections.

Intersection Control Devices: Intersection signs, traffic signals, signal design methods, Signal timing design, Signal coordination, Intersection Marking, and Intersection Lighting

CTE-211: URBAN PLANNING TECHNIQUES AND PRACTICE

SEMESTER: IInd	L	T	P	C
COURSE NO. CTE-211	2	1	0	3

Land use Activities: Analysis and prediction of important land use activities like population , employment, housing, shopping, leisure, transport.

Spatial standards: Spatial standards for residential, industrial, commercial and recreational areas, space standards for facility areas and utilities, Process of implementation, Provisions of Town Planning Act, zoning, subdivision practice, metro region concept.

Techniques of Preparation of Base Maps: Drawing size, scale, format, orientation, reduction and enlargement of base maps.

Town Development Plan: Scope, contents and preparation. A case study of development plan, scope, content and preparation of zonal development plans, plan implementation - organisational legal and financial aspects, public participation in plan formulation and implementation.

Urban Renewal: Meaning, significance, scope and limitations, urban renewal as a part of metropolitan plan, the process of urban renewal, identification of renewal areas, renewal policies and strategies and management of renewal areas, central areas and their renewal.

Concept of New Towns: Meaning, role and functions: Special planning and development considerations, scope and limitations of new town development, Indian and British experience of planning and development of new towns.

Recent Trends & Practices: In planning and development system in India, Outline of planning and development system in U.K., U.S.A. and U.S.S.R..

CGE-201 GROUND IMPROVEMENT TECHNIQUES

SEMESTER: IInd	L	T	P	C
COURSE NO. CGE -201	2	1	0	3

Site investigation and subsoil exploration; Need for soil stabilization, Principles of soil stabilization; Methods of soil stabilization- Mechanical, lime, cement, bitumen, special chemicals and other waste materials, Mechanisms of soil stabilization, Dynamic compaction; Preloading; Vertical drains; Granular piles; Grouting; Soil nailing; Anchors; Vacuum consolidation; Thermal, electrical and chemical methods; Soil Reinforcement; Case histories.

3RD SEMESTER

CTE-301 PAVEMENT EVALUATION AND MANAGEMENT

SEMESTER: III rd	L	T	P	C
COURSE NO. CTE-301	2	1	0	3

Introduction: Pavement distress, distresses in rigid and flexible pavement, distress condition survey, pavement evaluation, types of pavement evaluation, and pavement evaluation methods.

Functional Evaluation of Pavement: Functional evaluation, Types, Roughness measurement: Serviceability Concept, Present serviceability index, International roughness index, TRL Merlin, Bump integrator, Pavement Surface Friction: measurement, variation with time, traffic and climate.

Structural Evaluation of Pavement: Structural evaluation, Types, Methods of structural evaluation, Benkelman beam method, Falling Weight Deflectometer, Dynamic cone penetrometer (DCP), Design of flexible and rigid overlays.

Pavement Management System (PMS): Pavement maintenance, need and types of maintenance, Maintenance strategies, PMS, component of PMS, steps in implementation of a PMS, Application of PMS, Pavement life cycle cost analysis components and methods, HDM Software applications.

CTE-302: AIRPORT PLANNING AND DESIGN

SEMESTER: III rd	L	T	P	C
COURSE NO. CTE-302	2	1	0	3

Air Transportation: Airport terminology, classification and size of airports, aircraft characteristics, Air Traffic Management -need for air traffic control, network, importance of flight rules, navigational aids, obstruction and clearance requirements.

Airport Planning: Forecasting for airport planning, Airport master plan – FAA recommendation, air traffic demand analysis, Planning surveys, Airport zoning, future air traffic needs.

Geometric And Structural Design: Windrose diagram, Runway, Runway orientation-, runway length, corrections, control tower visibility requirements. taxiway and apron geometric design, exit taxiways, Separation and clearances, Design factors, FAA Pavement design methods, flexible and rigid pavement design.

Terminal Areas & Visual Aids: Facilities, space requirements, terminal planning process, number and size of gate positions, aircraft parking system. Airport markings, lighting, signage, visibility, and visual aids.

Elective-V

CTE-303: COLD REGION & HILL ROAD ENGINEERING

SEMESTER: IIIrd	L	T	P	C
COURSE NO. CTE-303	2	1	0	3

Characteristics of hilly terrains in India, Challenges due to climatic and topographical factors, Importance of road networks in hill regions, National and State Highways, Major District Roads, Other District Roads, and Village Roads, Ecological considerations in planning, Traffic and population assessment for road design.

Geometric design of hill roads; road widths, carriageways, shoulders, and camber, Sight distance, Design speed and gradient specifications, Elements of curves: Superelevation, transition curves, and reverse curves, Passing places and bridle paths. Hair-pin bends and unstable zones, Design criteria for hair-pin bends, Alternative routes, optimization.

Pavement Design in Cold and Hill Regions; Bituminous and concrete pavements for cold climates, Pavement performance under freezing and thawing cycles.

Drainage systems for heavy rainfall and snowmelt, Erosion control and sediment management, Use of retaining walls, Identification of slide-prone areas, Measures for avalanche and flood risk mitigation, Emergency escape routes and design of escape lanes, Case studies of best practices in cold and hill road engineering.

Relevant technical papers from the Indian Roads Congress and Ministry of Road Transport & Highways.

CTE-304: PROJECT APPRAISALS & DEVELOPMENT MANAGEMENT

SEMESTER: IIIrd	L	T	P	C
COURSE NO. CTE-304	2	1	0	3

Philosophy of project, Project goals, Project Formulation, Life Cycle Analysis, Feasibility and Impact Analysis, Effectiveness Analysis, Multi Criteria Evaluation Methods, Analytical Hierarchal Method, Decision Making Under Risk

Project Appraisals: Types of appraisals, Project cost, Project financing, Economic evaluation methods, Case Studies of Projects, Environmental Appraisal, Financing of transport infrastructure, Public – Private Partnership-BOT, BOOT etc., Risk & Sensitivity analysis, Break even analysis.

Philosophy of Management, Project Organisation, Management Techniques, Network approach, Project Planning Software applications, Safety management, Labour organization and labour laws, Project cost & time management, Management Case Studies.

Development Management: Concepts, components, principles, organizational structures of urban Local Government, functions & responsibilities, related Municipal Corporation Act, Town Planning Act, case studies of organizational structures of metropolitan cities in India.

5. Municipal Corporation Act and Town Planning Act.

CSE-301: ADVANCED BRIDGE ENGINEERING

SEMESTER: IIIrd	L	T	P	C
COURSE NO. CSE-301	2	1	0	3

History of Bridge Development: Classification of bridges, Selection of bridge sites, Bridge alignment, Sub-surface investigations, Bridge Hydrology, Flood discharge, waterways, scour depth, depth of foundation, standards of loadings, types of loads, impact effect, wind loads, seismic forces, buoyancy, earth pressure, loadings on various bridges, traffic requirements, types of low cost bridges, Settlements, Allowable soil pressures, types of foundations, foundation failures, foundation setting, cofferdams

Bridge Super structure: Superstructure elements, Bridge flooring, design of slab bridges & girder bridges, Bridge bearings, joins in bridges, bridge superstructures, piers, abutments, wingwalls and approaches,

Bridge construction: Erection of steel girder bridges, truss bridges, suspension bridges, maintenance of bridges, bridge testing for safe carrying capacity, Strengthening of bridges, aesthetical treatments.

References:

1. Bindra S.P., Bridge Engineering, Dhanpat Rai & Sons
2. Relevant IRC codes,
3. MoRTH Specification for Roads & Bridges

CWE-302:HYDRAULIC STRUCTURES

SEMESTER: IIIrd	L	T	P	C
COURSE NO. CWE -302	2	1	0	3

Highway Drainage: Importance, principles of surface drainage, roadside drains- cross-section; design, drains for hill roads, subsurface drains, capillary cut-off treatment.

Cross Drainage Works: Importance of cross drainage, causeways, culverts & bridges- types; estimation of design discharge, fixation of waterway, foundation depth and spans.

Design procedure for irrigation channels, Irrigation outlets, Canal masonry works, - principles of design, use of flow net, Khosla's theory, Regulation works - Falls, distributory head regulators,

Cross regulators, Canal head Works, Earth Dams, Gravity Dams, Spillways and Energy dissipators, Escapes, Trench weirs, Supply channel and head regulator.

CTE-305: DISSERTATION PRELIMINARIES

SEMESTER: IIIrd	L	T	P	C
COURSE NO. CTE-305	0	0	10	5

Dissertation preliminaries should clearly identify the goals & objectives and scope of the dissertation work taken up by the candidate. The focus is on data identification and proposed field surveys, questionnaire design, sample size decision. The study methodology and literature review on the dissertation topic is to be completed and a typed report is to be finalized in consultation with dissertation supervisor and submitted for the assessment at the end of the semester.

4TH SEMESTER

CTE-401 DISSERTATION

SEMESTER: IVth	L	T	P	C
COURSE NO. CTE-401	0	0	25	12

1. The preliminary dissertation work initiated in Third semester is further extended over fourth semester to cover up the field studies, data analysis, modeling , if any and research finding followed by conclusion etc.
2. The main objective of the dissertation work is to provide scope for original & independent research to express the ability of using analytical approach or technical investigation.
3. Thesis is to be prepared by each student under the guidance of faculty supervisor and finally submitted in six typed bound sets as per the specified time.
4. The assessment of the dissertation work will be carried out in two stages, first during the semester for 100 marks, followed by final viva-voce exam for 200 marks at the end of the semester.
